**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Derick Iuto on 1/10/05.

The application has been amended as follows:

Claim 11, line 4, the expression "forming a first area" recited thereof is changed to -- forming a predefined first area --;

Claim 11, line 7, the expression "forming a second area" recited thereof is changed to -- forming a second predefined area different from the first predefined area--  
;

Claim 18, line 3, the expression "has a first area" recited thereof is changed to -- has a first predefined area --;

Claim 18, line 4, the expression "a second area" recited thereof is changed to -- a second predefined area different from the first predefined area --;

Claim 19, line 3, the expression "a first area" recited thereof is changed to -- a first predefined area --;

Claim 19, line 5, the expression "a second area" recited thereof is changed to -- a second predefined area different from the first predefined area --;

Claim 25, line 3, the expression "a first area" recited thereof is changed to -- a first predefined area --;

Claim 25, line 5, the expression "a second area" recited thereof is changed to -- a second predefined area different from the first predefined area --;

Claim 36, line 3, the expression "a first area" recited thereof is changed to -- a first predefined area --;

Claim 36, line 5, the expression "a second area" recited thereof is changed to -- a second predefined area different from the first predefined area --.

11. (Amended) A method of arranging divided recording area segments of a recording medium in a broadcast receiving system having a hard disk drive, the method comprising:

forming a predefined first area on the recording medium, for recording a first broadcast signal which is currently being broadcast and reproducing a second broadcast signal previously recorded in real time; and

forming a second predefined area different from the first predefined area on the recording medium, for recording a third broadcast signal at a reserved time.

18. (Amended) A method of processing broadcast signals from/on a recording medium in a broadcast receiving system having a hard disk drive, wherein the recording medium has a first predefined area, for recording a first broadcast signal which is currently being broadcast and reproducing a second broadcast signal previously recorded in real time, and a second predefined area different from the first predefined area, for recording a third broadcast signal at a reserved time, and a fourth broadcast signal previously recorded, the method comprising:

inputting the first and third broadcast signals simultaneously in a first period;

recording the first and third broadcast signals on the first and second areas, respectively, and reading the second and fourth broadcast signals from the first and second areas, respectively, in a second period next to the first period; and

reproducing the read second and fourth broadcast signals in a third time period next to the second period.

19. (Amended) A recording medium in a broadcast receiving system having a hard disk drive, the recording medium comprising:

a first predefined area to record a first broadcast signal which is currently being broadcast and reproduce a second broadcast signal previously recorded in real time; and

a second predefined area different from the first predefined area, to record a third broadcast signal at a reserved time.

25. (Amended) A broadcast receiving system, comprising:

a hard disk drive having a hard drive; and

a controller which forms a first predefined area on the recording medium, for recording a first broadcast signal which is currently being broadcast and reproducing a second broadcast signal previously recorded in real time, and forms a second predefined area different from the first predefined area on the recording medium, for recording a third broadcast signal at a reserved time.

36. (Amended) A broadcast receiving system for processing broadcast signals

from/on a recording medium in a broadcast receiving system having a hard disk drive, wherein the recording medium has a first predefined area, for recording a first broadcast signal which is currently being broadcast and reproducing a second broadcast signal previously recorded in real time, and a predefined second area different from the first predefined area, for recording a third broadcast signal at a

reserved time, and a fourth broadcast signal previously recorded, the broadcast receiving system comprising:

a random access memory to receive the first and third broadcast signals simultaneously in a first period,

a hard disk drive to record the first and third broadcast signals on the first and second areas, respectively, and reading the second and fourth broadcast signals from the first and second areas, respectively, in a second period next to the first period; and

a video recovery unit to reproduce the read second and fourth broadcast signals in a third time period next to the second period.
